Recent versions of Photoshop can be download from Adobe's website at www.adobe.com/in/design. Adobe Photoshop CS5 (and above) is available as an inexpensive upgrade from the previous version, Photoshop CS4. The download for CS6 (currently in beta) is free. If you're familiar with Windows, other programs in the Adobe Suite (see the earlier sidebar) are made available for the Mac. Mac users can use Adobe Premiere Pro CS6, Flash Professional CS6 and After Effects CS6. On top of the usual tools (like the Photoshop Basic, Express, and Premium versions), Adobe includes several other programs for photographers and designers: Adobe Photoshop Lightroom: Organizes, edits, and adjusts your photos or video. Adobe Photoshop Express: A free, fast photo editor for iOS devices, PCs, and Macs. Adobe Photoshop Importer: Import high-resolution images from images on your iOS device. Adobe Photoshop Mobile: Embed images for web and mobile content creation. Adobe Photoshop Mix: Create soundtracks and music videos. You can create cool new designs with this tool. (See Figure 7-4.) FIGURE 7-4: The Shape Pen tool creates shapes on a canvas, each with defined stroke and fill colors. New layer stack organization: Layer stacks are now easier to manage. You can move layers in or out of an existing layer stack. The new layer stacks are called Layers 1, Layers 2, and so on. New items: The history feature tracks recent image edits, including a Recent History panel that lists only the most recent recent changes. Saved states: The saved states feature is added to the Save panel, giving you the option to recall previous versions of your image. It also gives you the option to save your images in the JPEG format. This feature is explained in more detail in Chapter 8. Camera Raw conversion: Camera Raw enables you to open RAW images directly in Photoshop. The other option is to open the RAW file in Camera Raw before opening it in Photoshop. Adobe Photoshop Album: It's a new gallery that automatically opens when you create a new image, and it displays all the images you

Choose the background layer on your file. If it is underneath other layers, just click once on it. With the Eyedropper tool and holding the Shift key, click on a background color. The color will appear in the Color Picker. Choose the Erase command, then choose the background color as the area that is to be removed. Click on your background layer. The color is now gone.
